01 Results at a glance

Activated embryos	Reached Shield	Promoted fish	All living fish
690	77	18	12

Embryo-to-cloned-fish workflow

Step	Count	% previous	% activated
Activated	690	100.00%	100.00%
Reached Shield	77	11.16%	11.16%
Reached Day 1	46	59.74%	6.67%
Promoted	18	39.13%	2.61%
Alive Fish	11	61.11%	1.59%

The workflow counts fish promoted from embryos. The living-fish total above includes all fish in the selected dataset.

Embryo outcomes

Measure	Result
Experiment batches	14
Reached Day 1	46
Normal embryos	13.48%

All fish status

Measure	Count
Dead	0
Frozen	6
Discarded	1
Normal / abnormal	19 / 0

Scope and interpretation

Figures follow the stated filters and are descriptive, not statistical conclusions. — or Unknown means unavailable, not zero. Vital status and condition are separate dimensions and must not be added together.

Incomplete source data: review data-quality details in Research results before drawing conclusions.

02 Items for discussion

Rows are selected by the criteria below for immediate follow-up. The full analytical report contains every row.

01 / Longest observation gaps

Showing 0 of 0 rows · most missed days first

Fish	Last observed	Missed days
No observation gaps in this dataset		

02 / Largest checkpoint timing deviations

Showing 5 of 207 rows · absolute median deviation · positive = late / negative = early

Group	Stage	n	Median (hours)
MSU / AB / RK701	90% epiboly	6	-0.04
KU / TU / CONTROL	Day 1	8	0.04
KU / AB / RK701	Day 3	6	-0.04
MSU / TU / RK701	Day 4	4	0.04
KU / TU / CONTROL	2-cell	94	0.04

Further review

Group, stage and age-specific survival details are available in the full analytical report. Excel and R CSV downloads provide data for further analysis.
